The Flying Wing Comes to Life

The B-2 Bomber

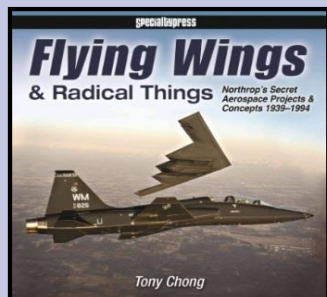

June 24, 2017
11 AM Lecture

Don Weiss, B-2 Chief Test Pilot

Troy Johnson, Aerospace Systems Sector Chief Test Pilot

Available for purchase at Lecture

Two illustrious test pilots will describe the life of one of the most remarkable aircraft ever built. The B-2 Stealth Bomber combined aerodynamic efficiency and low observable technology to prove the practical value of the life-long dream of Jack Northrop to use the flying wing concept to build the most efficient and effective aircraft the world has ever seen. Although it was not designed until very near the end of Jack Northrop's life, he was permitted to receive a top secret briefing on its development and eventual deployment. Thus, in his own lifetime, he saw his dream fulfilled. Don Weiss and Troy Johnson are two of the pilots whose piloting skill and technical expertise helped to demonstrate the practical capabilities of this remarkable aircraft. Please join us as they describe the B-2 Spirit Bombers' history, development and special capabilities as a mainstay of our national defense arsenal.
