Space for Everyone: How Small Satellites are Changing the Space Industry — and the Planet

April 21, 2018
11 AM Lecture

Dan Hart, CEO
Virgin Orbit

Satellites improve life for people all around the planet — but so long as satellites are expensive, rare, and exclusive to only a few nations and a few companies, that improvement comes with real limitations. A new day is dawning now in the space industry, with the price of missions coming down dramatically, opening up space to new players and allowing the traditional leaders to do more with less money. Dan Hart, the CEO of Virgin Orbit, will speak about the changing nature of the satellite business and about how Long Beach-based rocket maker Virgin Orbit is playing a critical role in busting down the barriers that limit the utilization of space.
